SHINE EXTRA METALLISED FLOOR POLISH

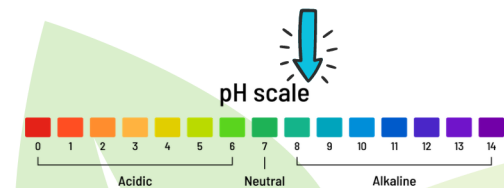

-  Strong Polymer Film
-  High Shine Finish
-  Suitable for Wide Range of Floors

Description:

ProJanta Shine Extra is a metallised floor polish developed for exceptional strength, durability and long-lasting floor protection. It forms a tough, non-yellowing polymer film that helps preserve the appearance of floors without discolouring even lighter surfaces. Designed to produce a deep, attractive shine with excellent slip resistance, it is an ideal choice for areas where both presentation and performance are important. The formula also responds particularly well to spray burnishing techniques, helping to maintain a high-gloss finish over time.

Suitable for linoleum, PVC, rubber, sealed cork, sealed wood, terrazzo and thermoplastic floors, it is supplied as a white emulsion with a concentrate pH of 7-9. For best results, apply in thin, even coats to a clean, grease-free floor.

Useful Information:

Product Code:	2007
Product Colour:	White
Product Fragrance:	Ammonia
pH Level:	7 - 10

Directions:

Shine Extra should be applied only to a clean, grease-free floor to achieve the best high-gloss, durable finish. Before application, remove any existing polish using a suitable alkaline stripper, then rinse the floor thoroughly with clean water and allow it to dry completely. Once the surface is fully prepared, apply the product in a thin, even film using a clean lint-free mop or applicator. Allow the first coat to dry before applying a second coat to build protection and enhance shine. For an extreme high-gloss finish, buff the treated floor using a rotary machine. Suitable for use on linoleum, PVC, rubber, sealed cork, sealed wood, terrazzo and thermoplastic floors.

When handling and applying the product, suitable protective gloves and eye protection should be worn, and the product should be stored in a cool, well-ventilated place after use.
